

Work Order Risk Prioritisation (WORP) using Machine Learning

James Williams, Isogonal

EEA Asset Management Forum 2019

1

WORP Summary

Why is it needed

60,000 assets, 75,000 work orders, and more work orders are being opened than are being closed.

WORP

An automated machine learning system that processes the field engineer's descriptions, classifies the work order by (asset, component, risk category), and predicts a **risk rating** and cost estimate

What it has enabled

\$4-6 million removed from the annual predictive maintenance budget (2019), \$150 000 saved annually vs. manual process (engineer time), and BI reports to assist with financial planning and work order scheduling

2

Risk rating

Based on the likelihood of failure and the cost of failure

Relative risk score scaled to 0 - 1000

Categories

- Service Performance
- Direct Cost
- Workplace Safety
- Public Safety
- Environmental Safety

...uses Transpower's asset criticality assessment presented at EEA 2015, a dollar value for the cost of failure

Two Vectors: Asset Promisssh [svcs] and Risk Promisssh [svcs]

Likelihood of Consequence	Consequence Severity							
	Insignificant	Negligible	Minor	Moderate	Major	Severe	Critical	Catastrophic
Almost Certain	HIGH	HIGH	VERY HIGH	VERY HIGH	EXTREME	EXTREME	EXTREME	EXTREME
Very Likely	MEDIUM	HIGH	HIGH	VERY HIGH	VERY HIGH	EXTREME	EXTREME	EXTREME
Likely	MEDIUM	MEDIUM	HIGH	HIGH	VERY HIGH	VERY HIGH	EXTREME	EXTREME
Possible	LOW	MEDIUM	MEDIUM	HIGH	HIGH	VERY HIGH	VERY HIGH	EXTREME
Unlikely	LOW	LOW	MEDIUM	MEDIUM	HIGH	HIGH	VERY HIGH	VERY HIGH
Very Unlikely	VERY LOW	LOW	LOW	MEDIUM	MEDIUM	HIGH	HIGH	VERY HIGH
Rare	VERY LOW	VERY LOW	LOW	LOW	MEDIUM	MEDIUM	HIGH	HIGH
Very Rare	VERY LOW	VERY LOW	VERY LOW	LOW	LOW	MEDIUM	MEDIUM	HIGH

3

Financial Planning and Scheduling

BI reports of priority group vs. service area for RSM's and SDM's to use for planning

Updated daily

TRANSPOWER
Isogonal

Feedback and improvements

We're for New Zealand. Tū mai Aotearoa.

5

Types of feedback

- General improvements to the system overall
- Improving the accuracy and extensibility of the machine learning model
- Improving user understanding

We're for New Zealand. Tū mai Aotearoa.

6

6

Machine learning accuracy

More detailed asset hierarchy that better represents the real world, additional training data, resulting in higher confidence in the predicted cluster

Previous model

- 140 asset specific components
- 900 clusters
- 23,000 training examples (labeled work orders)
- 1,800 comparisons (cluster likelihood of failure)

Updated model

- 210 asset specific components
- 1,200 clusters
- 26,000 training examples (labeled work orders)
- 3,500 comparisons (cluster likelihood of failure)

7

Extensibility

Asset and risk hierarchy

Training

- Initial work order cluster examples 20181123
- More work order cluster examples 20190214
- ...

Ranking

- Work order cluster likelihood ranking

Criticality

- Asset type criticality
- Location criticality
- Work order criticality

Pricing

- Closed work order cost examples 20181123

8

Improving user understanding

Feedback 28,000 work orders have a risk rating between 0 and 100, making it hard to prioritise them individually.

Response This is partly due to incomplete asset specific criticality.

Add a filter to the BI report to flag work orders with incomplete asset specific criticality.

Improve coverage of asset specific criticality.

Feedback Vegetation work orders don't increase in risk rating over time as expected.

Response **Interpolate the risk rating based on when the work order was opened or when the vegetation was last trimmed relative to the planned start date.**

What can go wrong?

Inconsistent or inaccurate work order descriptions result in wrong predictions and an unreliable risk rating

Incomplete or out of date asset specific criticality can underestimate the risk rating

11

What next?

Mātai

Mobile application for condition assessment and data collection, used to add structured information to work orders as assets are inspected.

Lines assets ready

Stations assets development underway

Increase level of detail by recording and transcribing engineer's descriptions automatically

Include photos which can be used to check the visual condition, risk category

Location type	Description	Priority	Status
Structure Pole stru...	External earth missing 3m.	4	New Checked in Mātai 18/06/2019
Span Conductor	Max sag, Rows Fruit Trees, 20m into span, 0m LR	5	Valid Requested for cancellation 18/06/2019
Structure Pole stru...	One set of bird guards fitted to x2 channel arm strain. With spacers	4	Valid Checked in Mātai 18/06/2019
Structure Insulator...	No jumper insulators on all phases.	4	New 09/07/2017
Span Conductor	Max sag, Rows Fruit Trees, 1m into span, 0m LR	5	New 30/05/2017
Span Conductor	Max swing, Riverside Group Willow-Mature, 154m into span, 3.4m L	5	New 30/05/2017
Structure Pole stru...	Attachment-LSD-Other	3	Valid 24/09/2016

WORP Comparison Tool
James Williams

Cluster A

Asset at risk: "low voltage ac distribution system 400v"

Component at risk: "earth grid"

Main risk keyword: "faulty"

Not sensible

Cluster B

Asset at risk: "station/building fence"

Component at risk: "door"

Main risk keyword: "in disrepair"

Not sensible

	Cluster A	Cluster B
Which cluster is more likely to impact service performance ?	NA A more likely Equally likely B more likely	Equally likely B more likely
Which cluster is more likely to incur a direct cost for asset replacement?	NA A more likely Equally likely B more likely	Equally likely B more likely
Which cluster is more likely to cause a public safety consequence?	NA A more likely Equally likely	Equally likely B more likely
Which cluster is more likely to cause a worker safety consequence?	NA A more likely Equally likely B more likely	Equally likely B more likely
Which cluster is more likely to have an environmental impact?	NA A more likely Equally likely B more likely	Equally likely B more likely
